EXPERIMENT 19

Prolog Program – Student, Teacher and Subject Code

Aim

To write and execute a **Prolog program to create a database containing Student Name, Teacher Name, and Subject Code**, and retrieve the details using Prolog queries.

Algorithm

1. Start GNU Prolog.
2. Define a predicate student_teacher_subject(Student, Teacher, SubjectCode).
3. Store student, teacher, and subject code details as facts.
4. Load the program into GNU Prolog.
5. Enter a student name as a query.
6. Prolog searches the database for the matching student.
7. Retrieve and display the corresponding teacher and subject code.
8. Display the result.
9. Stop.

Program

% Student - Teacher - Subject Code Database

student_teacher_subject('Arun', 'Ravi', 'AI101').

```
student_teacher_subject('Bala', 'Kumar', 'ML102').
```

```
student_teacher_subject('Chitra', 'Priya', 'DB103').
```

```
student_teacher_subject('Divya', 'Suresh', 'OS104').
```

```
student_teacher_subject('Kavin', 'Anitha', 'CN105').
```

Input

```
student_teacher_subject('Arun', Teacher, SubjectCode).
```

Output

```
yes
| ?- student_teacher_subject('Arun', Teacher, SubjectCode).

SubjectCode = 'AI101'
Teacher = 'Ravi'

yes
| ?- |
```

Result

Thus, the Prolog program for Student–Teacher–Subject Code database was successfully implemented and executed, and the required teacher and subject code were retrieved successfully.
